Technical specifications

Backend technologies
- Main services (Core, Core Banking, Crypto Exchange, etc) are developed in **.Net Core**
- Some specific services are developed in **Node JS**

Frontend technologies
- Mobile App is developed in **React Native**
- Web Apps developed in **React JS**

Database
- Amazon Relational Database Service

Technical specifications

► Applications are hosted and deployed in **AWS** using **Terraform,** which allows us to manage our infrastructure as code. This approach enhances scalability, reliability, and efficiency, enabling us to automate deployment processes and maintain consistent environments across various stages of development.

► Crypto wallets are managed using **Fireblocks**, a cutting-edge solution known for its robust security features and user-friendly interface. This ensures that your users' digital assets are safe, accessible, and easy to manage, further enhancing the overall reliability and security of our cryptocurrency services.

Technical specifications

- Other technologies

- **Amazon SQS**: We use Amazon Simple Queue Service (SQS) for reliable and scalable message queuing between microservices. This ensures seamless communication and data transfer, enhancing the overall performance and reliability of our applications.

- Firebase Messaging: For push notifications to our mobile app, we utilize **Firebase Cloud Messaging (FCM)**. This robust solution allows us to send timely and relevant notifications to our users, ensuring they stay informed and engaged with our services.
 **APIs**: RESTful APIs for seamless integration with existing banking systems and third-party services.

Technical specifications

▶ KYC- Sumsub for a fast onboarding.

▶ KYT-KYW (Know your transaction-know your wallet) as an extra layer of security for end user.
